

Summary Prospectus

July 31, 2026

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's Statutory Prospectus and Statement of Additional Information and other information about the Fund online at www.aafetfs.com. You may also obtain this information by calling collect at 1-323-925-3305 or by sending an e-mail request to information@altacfunds.com. The Fund's Prospectus and Statement of Additional Information, both dated July 31, 2026, as each may be amended or supplemented, are incorporated by reference into this Summary Prospectus.

Investment Objective

Alternative Access First Priority CLO Bond ETF (the "Fund") seeks capital preservation and income.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management fees	0.19%
Distribution and Service (Rule 12b-1) fees	0.00%
Other expenses	0.00%
Total annual fund operating expenses	0.19%

¹ "Management fees" have been restated to reflect current management fees, effective February 1, 2026.

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 Year	3 Years	5 Years	10 Years
\$19	\$61	\$107	\$243

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 32% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively-managed exchange-traded fund ("ETF"). Under normal circumstances, the Fund invests at least 80% of its net assets (plus any borrowings for investment purposes) in AAA rated first priority debt tranches of U.S. dollar-dominated collateralized loan obligations ("CLOs").

CLOs are ordinarily issued by trusts or other special purpose entities (“SPEs”) that are typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. The Fund may invest in CLOs of any maturity. The Fund is actively managed and does not seek to track the performance of any particular index.

The Fund principally invests in CLOs with the following criteria:

Rated AAA

No CLO, at the time of purchase by the Fund, will have a rating that is below AAA (or equivalent by a nationally recognized statistical rating organization (“NRSRO”). An NRSRO is a credit rating agency such as Moody’s Investors Service, Inc. (“Moody’s”), Standard & Poor’s, a division of McGraw Hill Companies Inc. (“S&P”), or Fitch Ratings Ltd. (“Fitch”), that issues credit ratings that the SEC permits other financial firms to use for certain regulatory purposes. After purchase, a CLO’s rating may decline below the minimum rating required by the Fund for purchase. In such cases, Alternative Access Funds, LLC, the Fund’s investment advisor (“AAF” or the “Advisor”), will consider whether continuing to hold the CLO is in the best interest of the Fund.

Broadly Syndicated Senior-Secured Loans

The underlying collateral pool for each CLO must be comprised primarily (typically 90%) of broadly syndicated senior-secured first lien loans. A Broadly Syndicated Loan CLO (“BSL CLO”) is a CLO that limits the amount of loan collateral whose offering size is typically less than \$250 million to a maximum of approximately 5% of the portfolio. No investments will be made in middle market CLOs, collateralized bond obligations (“CBOs”), asset-backed securities (“ABS”), collateralized debt obligations (“CDOs”) and synthetic CLOs.

First Priority Tranches Only

The Fund will invest only in the senior-most tranches of CLOs. The cash flows from a CLO SPE are generally split into two or more portions, called tranches, varying in risk and yield. Senior tranches are paid from the cash flows of the underlying assets before the junior tranches and equity, or “first loss,” tranches. Losses are first borne by the equity tranches, then by the junior tranches, and finally by the senior tranches. Senior tranches pay the lowest interest rates but are generally safer investments than more junior tranches because, should there be any default, senior tranches are typically paid first. For the avoidance of doubt, the CLOs that the Fund purchases will be the senior-most tranches, consisting of floating rate bonds that rank first in priority of payments, at the time the CLO is issued. The Fund will not purchase CLO tranches that have subsequently become the senior-most tranches due to amortization of previously more senior tranches.

Minimum Offering and Tranche Size

The Fund will only invest in a CLO with a minimum initial total deal size of \$300 million and minimum initial AAA tranche size of \$150 million.

Maximum Positions Size

The Fund will not invest more than 5% of its total assets in any single security.

Maximum CLO Manager Exposure

The Fund will not invest more than 10% of its total assets in any single CLO manager.

Maximum Weighted Average Rating Factor

Each CLO will have a maximum Weighted Average Rating Factor (the “WARF”) (the “Maximum WARF”), at the time of purchase, of less than the greater of: a) 3,000, and b) the median WARF value of all outstanding broadly syndicated CLOs (as determined by AAF). WARF is a measure that is used by credit rating companies to indicate the quality of a CLO by aggregating the credit ratings of the CLO’s holdings into a single numerical value. If no WARF is calculated by the manager of a particular CLO, AAF will at its discretion invest only in a CLO that it believes would not exceed the Maximum WARF. After purchase, a CLO’s WARF may exceed the Maximum WARF. In such cases, AAF will consider whether to continue to hold the CLO. Additional information about the WARF is located in the “Additional Information About the Fund’s Investment Strategies” section.

Principal Risks

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved. The order of the risk factors set forth below does not indicate the significance of any particular risk factor.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence ("AI") and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

CLO Risk. A CLO is ordinarily issued by a trust or other SPE and is collateralized by a pool of credit-related assets. Accordingly, CLO securities present risks similar to those of other types of credit investments, including default (credit), interest rate and prepayment risks. The extent of these risks depend largely on the type of securities used as collateral and the class of the CLOs in which the Fund invests. In addition, CLOs are often governed by a complex series of legal documents and contracts, which increases the risk of dispute over the interpretation and enforceability of such documents relative to other types of investments. There is also a risk that the manager of a CLO does not properly carry out its duties to the CLO, potentially resulting in loss to the CLO.

CLO Leveraging Risk. CLOs are typically leveraged, and such leverage will magnify the loss on CLO investments, which may in turn magnify the loss experienced by the Fund. The cumulative effect of the use of leverage with respect to any investments in a market that moves adversely to such investments could result in a substantial loss that would be greater than if the Fund's investments were not leveraged. The Fund intends to invest only in the most senior tranches of CLOs (those that are also AAA-rated), which generally are less affected by the effects of leverage than more junior tranches.

Fixed Income Securities Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer's credit rating or market perceptions about the creditworthiness of an issuer. Generally fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall, and longer-term and lower rated securities are more volatile than shorter-term and higher rated securities.

Prepayment or Call Risk. If the Fund holds a fixed income security subject to prepayment or call risk, it may not benefit fully from the increase in value that other fixed income securities generally experience when interest rates fall. Upon prepayment of the security, the Fund may be forced to reinvest the proceeds in securities with lower yields. In addition, the Fund may lose the amount of the premium paid in the event of prepayment.

Extension Risk. When interest rates rise, repayments of fixed income securities may occur more slowly than anticipated, extending the effective duration of these fixed income securities at below market interest rates and causing their market prices to decline more than they would have declined due to the rise in interest rates alone.

Credit Risk. Debt securities, even investment-grade debt securities, are subject to credit risk. Credit risk is the risk that the inability or perceived inability of the issuer to make interest and principal payments will cause the value of the securities to decrease. As a result the Fund's net asset value per share ("NAV") could also decrease. Changes in the credit rating of a debt security held by the Fund could have a similar effect.

Interest Rate Risk. Generally fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall, with longer-term securities being more sensitive than shorter-term securities. For example, the price of a security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Generally, the longer the maturity and duration of a bond or fixed rate loan, the more sensitive it is to this risk. Falling interest rates also create the potential for a decline in the Fund's income. Changes in governmental policy, rising inflation rates, and general economic developments, among other factors, could cause interest rates to increase and could have a substantial and immediate effect on the values of the Fund's investments. In addition, a potential rise in interest rates may result in periods of volatility and increased redemptions that might require the Fund to liquidate portfolio securities at disadvantageous prices and times.

Floating Rate Notes Risk. Securities with floating or variable interest rates can be less sensitive to interest rate changes than securities with fixed interest rates, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. A decline in interest rates may result in a reduction of income received from floating rate securities held by the Fund and may adversely affect the value of the Fund's Shares. Generally, floating rate securities carry lower yields than fixed notes of the same maturity. The interest rate for a floating rate note resets or adjusts periodically by reference to a benchmark interest rate. The impact of interest rate changes on floating rate investments is typically mitigated by the periodic interest rate reset of the investments. Securities with longer durations tend to be more sensitive to interest rate changes, usually making them more volatile than securities with shorter durations. Floating rate notes generally are subject to legal or contractual restrictions on resale, may trade infrequently, and their value may be impaired when the Fund needs to liquidate such loans. Benchmark interest rates, such as the Secured Overnight Financing Rate ("SOFR"), may not accurately track market interest rates.

Private Placements and Restricted Securities Risk. Private placement securities are securities that have been privately placed and are not registered under the Securities Act of 1933, as amended. They are eligible for sale only to certain eligible investors. Private placements often may offer attractive opportunities for investment not otherwise available on the open market. Private placement and other "restricted" securities often cannot be sold to the public without registration under the Securities Act or an exemption from registration (such as Rules 144 or 144A). Certain private placements and other restricted securities may be considered illiquid securities.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to create or redeem, shares may trade at a discount to the Fund's NAV and possibly face delisting.
- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Fluctuation of Net Asset Value Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market prices of Shares will approximate the Fund's NAV, there may be times when the market prices of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Fund Shares may decrease considerably and cause the market price of Fund Shares to deviate significantly from the Fund's NAV.
- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Fund Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Fund Shares are trading on the Exchange, which could result in a decrease in value of the Fund Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the Fund's NAV and the Fund's market price. This reduced effectiveness could result in Fund Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Fund Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called “Creation Units”. Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.
- *Trading Issues Risk.* Although the Fund Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Fund Shares will develop or be maintained. Trading in Fund Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Fund Shares inadvisable. In addition, trading in Fund Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange “circuit breaker” rules. Market makers are under no obligation to make a market in the Fund Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Transactions in Cash Risk. The Fund intends to effect its creations and redemptions primarily for cash, rather than in-kind securities. Paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments at an inopportune time to obtain the cash needed to pay redemption proceeds. This may cause the Fund to incur certain costs such as brokerage costs, and to recognize gains or losses that it might not have incurred if it had paid redemption proceeds in-kind. As a result, the Fund may pay out higher or lower annual capital gains distributions than ETFs that redeem in-kind. In addition, the costs imposed on the Fund will decrease the Fund’s NAV unless the costs are offset by a transaction fee payable by an AP.

Liquidity Risk. The Fund may not be able to sell some or all of the investments that it holds due to a lack of demand in the marketplace or other factors such as market turmoil, or if the Fund is forced to sell an illiquid asset to meet redemption requests or other cash needs it may only be able to sell those investments at a loss. In addition, the reduction in dealer market-making capacity in the fixed income markets that has occurred in recent years has the potential to decrease the liquidity of the Fund’s investments. Illiquid assets may also be difficult to value.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund’s service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and AAF seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

Management and Strategy Risk. The value of your investment depends on the judgment of the Fund’s Advisor about the quality, relative yield, value or market trends affecting a particular security, industry, sector or region, which may prove to be incorrect.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks’ interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia’s invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund’s investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund’s investments and negatively impact the Fund’s performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder’s ability to trade Fund Shares may be affected. The use of AI and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

Performance

The Fund adopted the performance of the AAF First Priority CLO Bond ETF, a series of Listed Fund Trust (the “Predecessor Fund”), following the reorganization of the Predecessor Fund into the Trust on October 14, 2022. As a result of the acquisition, the Fund is the accounting successor of the Predecessor Fund. Performance results shown in the bar chart and the performance table below for periods prior to October 14, 2022, reflect the performance of the Predecessor Fund.

The bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year-to-year and by showing how the Fund’s average annual total returns based on net asset value compared to those of the Bloomberg US Universal Bond Index and the Bloomberg Floating Rate Note <5 Years Index. The Bloomberg US Universal Bond Index has been included as the Fund’s primary broad-based securities market index, and the Fund also compares its performance with the returns of the Bloomberg Floating Rate Note <5 Years Index, which the Advisor believes is a better performance benchmark for comparison to the Fund’s performance in light of the Fund’s investment strategy. The Fund’s performance information is accessible on the Fund’s website at www.aafetfs.com.

Calendar-Year Total Return (before taxes) for the Fund

For each calendar year at NAV

The year-to-date return as of June 30, 2026, was 2.33%.

Highest Calendar Quarter Return at NAV	2.37%	Quarter Ended 09/30/2023
Lowest Calendar Quarter Return at NAV	(1.47%)	Quarter Ended 06/30/2022

Average Annual Total Returns <i>(for periods ended December 31, 2025)</i>	One Year	Five Years	Since Inception (9/8/2020)
Return Before Taxes ¹	5.11%	4.31%	4.11%
Return After Taxes on Distributions ¹	2.95%	2.52%	2.40%
Return After Taxes on Distributions and Sale of Fund Shares ¹	3.00%	2.52%	2.41%
Bloomberg US Universal Bond Index (reflects no deduction for fees, expenses or taxes)	7.58%	0.06%	0.25%
Bloomberg Floating Rate Note <5 Years Index (reflects no deduction for fees, expenses or taxes)	5.11%	3.99%	3.82%

¹ The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Returns before taxes do not reflect the effects of any income or capital gains taxes. After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Returns after taxes on distributions reflect the taxed return on the payment of dividends and capital gains. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Management

Investment Advisor
Alternative Access Funds, LLC

Portfolio Manager
Peter Coppa, Managing Partner of AAF, has served as portfolio manager of the Fund and Predecessor Fund since its inception in September 2020. Mr. Coppa is the portfolio manager and is responsible for the day-to-day management of the Fund's portfolio.

Purchase and Sale of Shares

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.aafetfs.com.

Tax Information

The Fund's distributions are generally taxable and will ordinarily be taxed as ordinary income or capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. Shareholders investing through such tax-advantaged arrangements may be taxed later upon withdrawal of monies from those arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
